

Clinical Practice in Correctional Medicine, 2nd Edition

Written and edited by 40 practitioners in prison systems and public health from across the nation, this critically acclaimed text comprehensively covers the medical issues specific to the correctional setting—essential, practical information not available in other books. It explores all major areas of correctional medicine, from intake to hospice care, including clinical management of diseases common among the incarcerated, ethical concerns, organization of health services delivery, patient-provider relations, legal issues and more. This edition delivers completely new sections on nursing and emergency services in the correctional setting, plus new chapters on hepatitis C, psychiatric nursing, self-inflicted injury, methadone in corrections, annual health examinations, telemedicine, geriatric care and end-of-life care. Edited by Michael Puisis, DO; published by Elsevier/Mosby. Publication date December 2005. Hardcover, 560 pgs.
